

John Austen-Brown,

I found your article rather philosophically profound, thank you.

If we consider that the term Renaissance refers to a rebirth of the original 3rd Century BC Western science, a great splitting of science can be observed to have occurred. Charlemagne's Renaissance was based upon St Augustine's (in collaboration with St Jerome) fusion of the Platonic tradition of Greek philosophy into the religion of the New Testament. The appointed custodian of that science, the Chief Librarian of the Great Library of Alexandria was the scientist and mathematician Hypatia, who was murdered by a Christian mob during Augustine's time. We can dismiss as nonsense the claims made by the Cambridge philosopher of history, F M Cornford, that Plato and Aristotle were the greatest fathers of the Christian religion, because the Classical Greek Era and the 3rd Century Greek science derived from it can be demonstrated to have been based upon a fractal logic worldview whilst the Christian translation of it is not based upon fractal logic at all.

The Harvard Smithsonian/NASA High Energy Astrophysics Division library published the papers showing the ancient Greek science belonged to a fractal worldview. The NASA HIGH ENERGY PROJECT - BEYOND EINSTEIN, NEW ENERGIES OF THE COSMOS cannot link the ancient Greek life-science to fractal logic because the second law of thermodynamics governing the present fixed world demands that all life sciences can only be about species evolving toward a universal heat death extinction rather than toward a fractal logic infinity. The NASA Project is scheduled for research up to 2030 and I consider that once this argument becomes public knowledge then things will change for the better.

*Re; ECE really opens up the future and only one of the new discoveries is that energy latent in spacetime can be extracted and used freely by mankind. No oil or coal burning, no atomic energy or greenhouse gas, but free electricity flowing everywhere to industry, homes, planes, cars and ships. By adding ancient Greek spiritual, or holographic engineering principles, already nano-photographed functioning within the DNA in defiance of the present understanding of the second law, ECE technology becomes the basis of even rather more profound technologies.*

During the early 1800s the English Church had the Rev, Thomas Malthus appointed director of economic and political policies of the East India Company and his population essay became synonymous with the second law of thermodynamics. Charles Darwin, employed by the East India Company fused his life science to second law entropic logic. Bankers, manipulating various frictions between Church powers, inherited the power innate in the anti-life properties of atomic decay, represented by the second law. Einstein's colleague, Sir Arthur Eddington called the second law, the supreme metaphysical law of the entire universe, while on a lesser fanatical note, Einstein referred to it as the premier law of all of science. ECE's modification of Einstein's work places it into the unified concept that Eddington attempted in error to conceive. Maria Montessori, listed in TIME Magazine's Century of Science as the greatest scientist of 1907, argued that by balancing the second law, which she referred to as the global energy greed law, with the conservation of universal energy law derived during the Classical Greek Era's (fractal) worldview, then the Golden Gates to the Future could be opened. Montessori was alluding to de Chardin's Golden Gates concept which has been logically extrapolated into the ECE structure.

At present in Australia, my Science-Art Research Centre is working with medical people to demonstrate how the creative process belongs to a fractal logic physics in defiance of the unbalanced energy understanding of the second law of thermodynamics.

Regards, Robert Pope.
